

RESPONSES TO FREQUENTLY ASKED QUESTIONS: **GENERAL INFORMATION**

Thank you for your interest in the amazing opportunity to bring to the world a product that is almost universally needed. Each of us faces a strong prospect that we will experience incontinence at some point in our lives.

This document includes our general FAQ to guide you through the initial questions heard most often as we introduce and share the device and concept with interested parties.

CAN A PERSON APPLY AND REMOVE THE URO-GARD™ THEMSELVES?

Yes! It is very easy to change the sheaths, and the base, when ready.

DOES IT CHANGE HOW YOUR CLOTHES FIT?

No, it is very low-profile.

CAN IT BE DRAINED WITHOUT REMOVING IT?

Yes, there is a drain valve, so you can drain and keep going. This can be done yourself at home or on the go.

DOES THE INTERNAL SHEATH ("CONDOM") IRRITATE THE SKIN?

No. A layer of Hydrogel, a water-based ointment often used for wound dressing, is applied to the skin prior to the device. This will both protect and promote skin healing, if necessary.

HOW DOES IT ELIMINATE ODOR?

First, because the collection bags don't have valves, so no odor is able to escape, and second, the bags don't leak, so there is no dried urine on or around the patient.

HOW MUCH ARE YOU RAISING AND HOW WILL YOU USE IT?

Reference the investments plan portion of the Executive Summary, available by request.

WHAT IS THE CURRENT PRICE OF STOCK?

\$0.30 (as of June 2020), expected to increase for the next round of investments.

WHAT WILL IT TAKE TO EARN A PROFIT?

2,100 patients, based 52-weeks of use per-patient.

WHAT MARKET WILL YOU START WITH?

Home-health and hospitals.

HOW WILL YOU SCALE?

In Home health, we will partner with one organization, and commit to serving a small group of patients. After a certain period of success, we will add an additional group at an increased size, and then expand into additional partners, with the same tiered model.

WHY HASN'T IT BEEN TESTED MORE WIDELY YET?

The current testing phase is internal, to allow for elimination of all variables prior to the next phase of friendly trials. Additional, more advanced trials and pursuing Class-2 advancements will be funded by investments.

WHEN DO YOU PLAN TO INTRODUCE THIS INTO THE HOSPITAL SYSTEMS?

When an un-interrupted supply chain can be guaranteed. It is very important to our mission that no patient experience the restored dignity through Uro-Gard™ and have to then return to diapers or another, less-comfortable solution.

HOW WILL YOU GET THESE INTO THE HOSPITALS?

The AMG Team has an extensive portfolio of relationships within the healthcare market. There are hospital organizations standing by and ready to be a part of the product launch.

ARE THERE ARE ALREADY DEVICES LIKE THIS ON THE MARKET?

There is one device for males; however, it is much more complicated and does not offer all the same design benefits. There is no existing solution for females.

DOES THIS DEVICE ADDRESS FEMALE INCONTINENCE?

No, the Uro-Gard™ is specific to male incontinence; however, a female solution is in development with a patent-pending, as well as a fecal solution – these are all part of “The Family of Incontinence Products™.”

ARE YOU PURSUING INTERNATIONAL PATENTS?

Yes, they are in the works.

Uro-Gard™ and The Family of Incontinence Products™
